PALLETS

Easy to clean

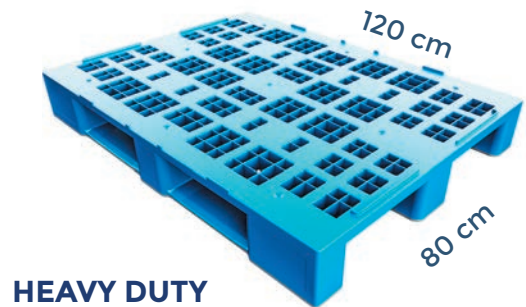

Heavy duty

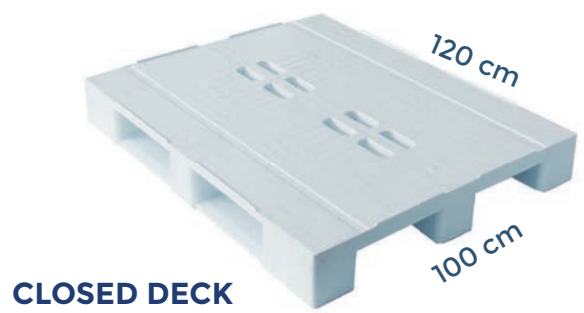

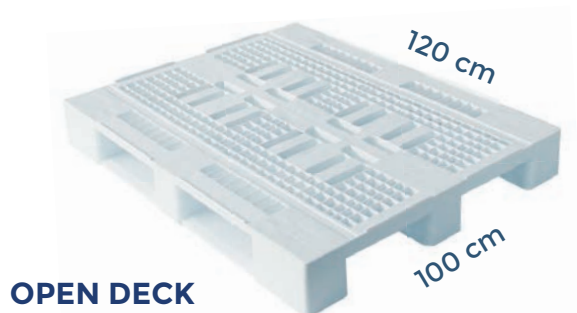

Strong and very durable

1200X800 SERIES - VIRGIN PLASTIC

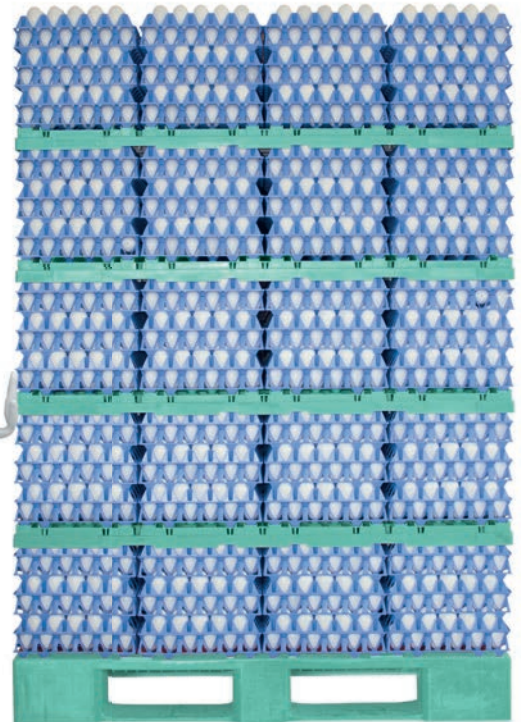

1200X1000 SERIES - VIRGIN PLASTIC

Silver ion technology, on which GI-OVO Clean Compound® is based, inhibits the growth of microorganisms as pathogen microbes and bacteria.

GI-OVO Clean Compound® can be used to produce all plastic used for the production of the EggsCargoSystem®. This is what we advise our customers. After all, using exclusively the trays produced with GI-OVO Clean Compound® means that the dividers and pallets remain an increased risk of contamination.

Reducion of bacterial charge

Improve the microbial safety of the EggsCargoSystem®

contributes to keeping your eggs production safe

GREEN ENERGY

Giordano Energy, belonging like GI-OVO to the Giordano Holding is the group company that ensures the energy production necessary to the associated Italian production site, thereby guaranteeing a more competitive cost. The choice of non-fossil fuel, but rather animal/vegetable fats, is perfectly in line with the environmental sensitivity that characterises the entire Group activity.

UV STABILIZATION

All our products are provided with UV stabilisation. This additive ensures that the aging process of plastic is slowed down, which means that our products retain the same plastic characteristics over a very long period.
