Since our company was established in 1998, sustainability is anchored in our DNA. Everything we do serves this purpose. For example, we only use virgin materials for our products and systems to guarantee a longer lifespan - reducing the environmental impact, already lower than any other alternative egg handling system. By recycling the products when they have reached the end of their lifespan, we further reduce the use of the planet resources. We produce our own green electricity through burning only non-fossil fuels. In everything we do we aim to make a maximum contribution to the circular economy.
